

# *Alaska 200 Club*

## *2<sup>nd</sup> Report*

### *1980*

The Alaska 200 Club emblem portrays a Steller's Jay, *Cyanocitta stelleri stelleri* [Gmelin, 1778 {Vancouver Island, British Columbia}], new to ornithology in July 1741 when discovered at Kayak Island (Southcoastal Alaska) by George Wilhelm Steller. This find convinced Steller that the expedition had indeed reached the New World, and in a manner, establishing the Steller's Jay as the first bird to the Alaska list. In the background is the vessel *Saint Peter* which carried Bering, Steller, and contingent to Alaska.

-----

Individual Alaska totals at end of dotted line; percentages are based on rounded State total of 390 (actual count is 388 species). Far right column is year when most recent addition posted. Next update 31 December 1981.

\*\*A Master's thesis recently completed at University of Alaska-Fairbanks by Declan M. Troy demonstrates in compelling fashion that "Hoary" and "Common" redpolls must be regarded as a single species. The AOU Checklist Committee will be provided a copy of this thesis, so most, if not all, of us must prepare to delete a "species" from our lists in the not distant future\*\*

Happy New Year and Good Birding in 1981!

Editor's Note:

Personal address were redacted before uploading to the internet. The record of Stephen O. MacDonald could not be edited or redacted, and was re-created.
